托盘

PALLET

托盘工作原理 Pallet working principle

托盘的作用是在输送系统中作为输送工件的工具将工件输送至各加工工位。托盘到达工位时,被挡停器挡停,而输送介质可以继续运行。

The pallet is as the transferring tool to convey the work-piece to each work station. The pallet will be stopped

应用:带有钢制或铝制承载托板的塑料边框托盘和带有钢制或铝制承载托板的铝型材边框托盘;均适用于小型、中型负载物。

Application. Plastic frame pallet and aluminum profile frame pallet, with steel or aluminum support plate, are both applicable for small load and medium load.

托盘可以利用不同模块为各种工件进行个性化的配置。为此,可选择不同的框架模块和承载托板。

For pallet, the modules can be assembled together to meet different requirements. Different frame modules and support plates can be chosen.

托盘可实现尺寸的连续性,满足客户不同的尺寸及特征上的要求。

For pallet the full dimension range meets customers requirements on dimensions and configurations.

输送介质 Belt type

输送介质单位承载能力 f 可以使用以下参数估算:

Unit loading capacity(f) of conveyor medium can be estimated with the following parameters:

齿形带输送介质单位承载能力:带 PE 摩擦条的托盘,允许表面负载最多达 0.6kg/cm;

Unit loading capacity of toothed belt pallet with PE friction strip, allowable load on the surface up to 0.6kg/cm.

片基带输送介质单位承载能力:带 PE 摩擦条的托盘,允许表面负载最多达 1kg/cm;

Unit loading capacity of base belt pallet with PE friction strip, allowable load on the surface up to 1kg/cm.

堆积滚子链输送介质单位承载能力:带 PE 摩擦条的托盘,允许表面负载最多达 3kg/cm;

Unit loading capacity of accumulation roller chain: pallet with PE friction strip, allowable load on the surface up to 3kg/cm.

托盘运用环境和案例 Pallet application environment and examples

均采用高品质材料,以确保连续使用工况。能够抵御工业环境中常见的润滑剂和清洗剂腐蚀。但是,不保证可耐各种测试液、气体及溶剂制品的腐蚀。所以客户在选择托盘产品时首先告知现场工况情况,以免造成不必要的损失如果您有任何疑问,请来电咨询!

The high quality material is chosen to ensure the continuous working condition. The pallet is protected from Corrosion of the common lubricants or cleaners in industrial area, but not corrosion of testing liquid, gas or solvent.

The customer need to inform the working condition on site before pallet selection to avoid unnecessary loss. Please contact us for any questions.

适用于对静电敏感的区域。

Applicable for area sensitive to static.

可防静电,适用于对静电敏感的区域。

ESD,applicable for area sensitive to static.

选择托盘

PALLET SELECTION

托盘的总质量 Estimation of pallet gross mass

允许的托盘总质量 M_G 视以下条件而定：

Allowable pallet gross mass M_g is subject to the following aspects

输送介质：皮带、齿形带、堆积滚子链；

Conveying medium: belt, toothed belt, accumulation roller chain

托盘与输送介质的表面接触长度 L_p 或 W_p 。

Contact length L_p or W_p between pallet and conveying medium

允许的托盘和工件总质量估算：

Estimation of allowable pallet and work-piece gross mass

● M_G : 托盘质量 + 工件质量, 单位: kg

M_G : weight of pallet + weight of work-piece, unit: kg

● L_p : 托盘长边尺寸, 单位: cm

L_p : long side of the pallet, unit: cm

● W_p : 托盘短边尺寸, 单位: cm

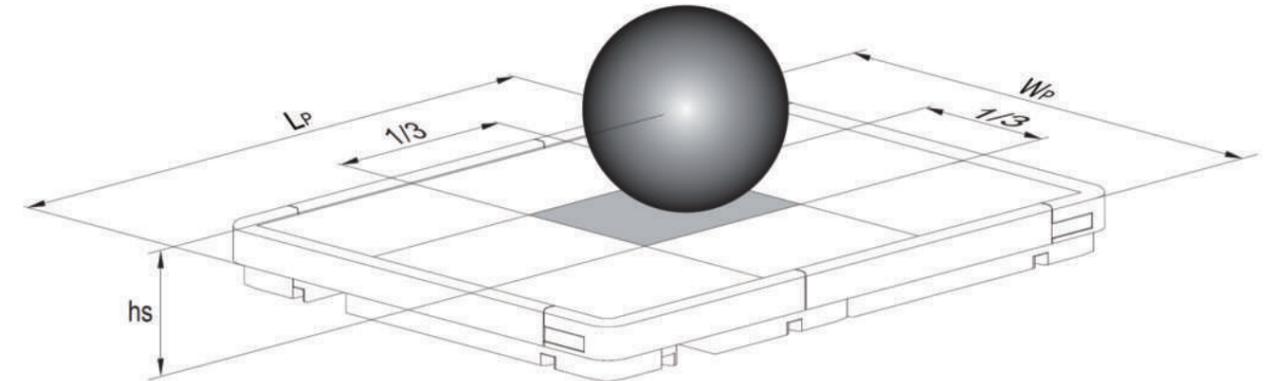

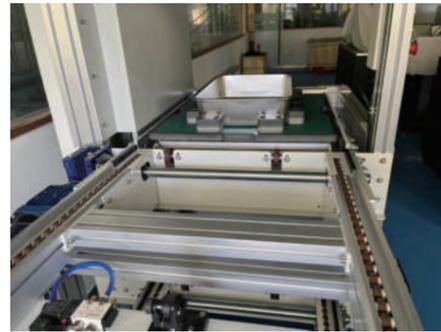

W_p : short side of the pallet, unit: cm

● f : 输送介质单位承载能力, 单位: kg/cm

f : Unit loading capacity of the conveying medium, unit: kg/cm

$$M_G = L_p \times f$$

$$M_G = W_p \times f$$

托盘允许的重心位置 Allowable center of gravity for the pallet

阻挡托盘或者改变输送方向时，托盘上负载的重心位置对于托盘的稳定性有决定性作用。负载物重心过高或偏移时影响设备及托盘的使用寿命。

The gravity center of the load on the pallet is crucial for the stability of the pallet when the pallet is stopped or direction changed. The service life of the equipment and pallet will be affected due to high gravity center or offset gravity center. It is suggested.

所以建议：

负载物必须放置在托盘的中心

The load shall be at the center of the pallet

负载物重心高度 h_s 不得超过 $1/2 W_p$ ($W_p < L_p$)

Height of load gravity h_s not more than $1/2 W_p$ ($W_p < L_p$)

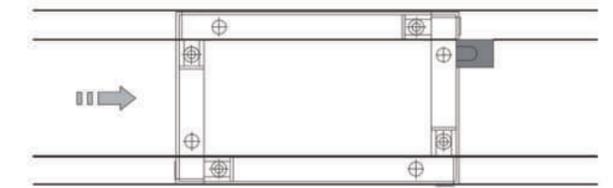

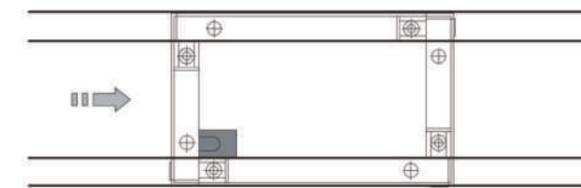

为了使工件在托盘中心承重，建议在使用重型工件或者重量分配不均匀的工件时选择尺寸更大的托盘

In order to keep the load at the center of the pallet, it is suggested to choose bigger pallet for big load or uneven load

托盘挡停器安装位置 Installation position of pallet stop

在使用托盘时，挡停器安装在托盘输送方向的左前侧、右后方进行档停。

When the stop is used with pallet, it will be mounted in rear right or front left position in the direction of transport

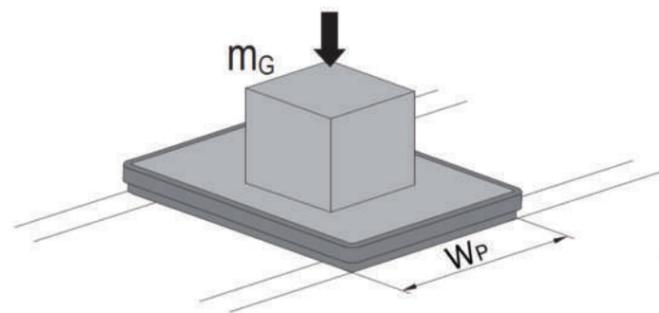

注意：

Note

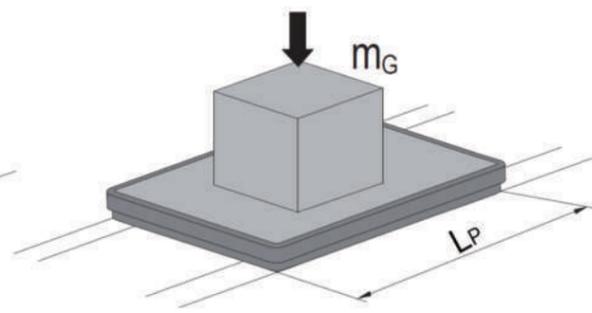

在同一输送系统中，对于输送非正方形托盘的输送线，同时有纵向和横向输送（托盘纵向输送与横向输送的表面接触长度不同）。托盘的短侧决定了最大允许的总重量， $M_G = W_p \times f$ 。

If the pallet is not in square but in rectangle, and transportation includes crosswise transport and lengthwise transport (different contact length) the max M_G according to the short side of pal-
